

Most car parks will require a level of mechanical ventilation to satisfy the requirements of UK building regulations, these range from simple solutions designed to assist natural airflows throughout the parking areas through to full mechanical systems for totally enclosed or underground structures, whatever the requirement Delta Ventilation have a solution available and can offer

- Full system design
- Full regulatory compliance
- Installation
- System commissioning
- After sales service and maintenance also available

Features

- Maintains safe air quality standards during normal operation
- On demand control reduces operation and maintenance cost
- Uncomplicated design reduces building construction cost, equipment investment and longer term operational and service costs.
- Maintains safe escape routes under emergency smoke and fire conditions
- Facilitates accessibility for the fire and rescue services
- Saves space over traditional ducted ventilation systems
- Flexibility of installation and operation avoids the problem of stagnant areas.
- Effective smoke control by limiting the spread of smoke and directing the smoke flow.
- Less ductwork means a safer, lighter environment with better air quality and improved security due to increased visibility.

Regulations and Standards

- National Building regulations approved document F1
- National Building regulations approved document B3
- BS7346-7
